AIR-ZONE

Lotto-patented technology for healthy feet.

AIR-ZONE makes safety footwear genuinely breathable, thanks to the specially designed openings on the sides of the sole and the system of internal tunnels that expel water vapor, perspiration while blocking water and dirt from getting in. The particular internal structure also gives high cushioning for optimal foot comfort. For dry, comfortable and protected feet in every situation.

Defence against external hazardous.

FLYcap, a light and effective protection made of composite material, is all about practicality and protection, given its compressive strength resistance of up to 200 Joule of transmitted energy. The ALcap aluminium toecap provides all the protection of a steel toecap while being much lighter, essential for tasks that take longer to resolve.

Electrostatic Discharge: Contact, but no risk.

An electrical resistance suited to your needs, to contain static energy and protect both the shoe wearer and the equipment he uses. The accumulated electrostatic charge is discharged to the ground, preventing any risk of shock.

A safe-as-houses barrier.

A light and innovative anti-perforation insole board with exceptional flexibility. Thanks to the elasticity of the material it is made of, it ensures maximum safety for the sole of the foot without sacrificing use practicality.

Maximum stability on all surfaces.

Maximum foot safety whatever the surface. The stabilizer foot-arch is a solution that controls shoe torsion and flexion, and allows free movement only when necessary. A unique technology that combines comfort with safety.

METALFREE

Metal left on the bench.

By using composite materials there are no metal parts while maximum comfort and great freedom of movement are the upsides. A totally metal-free shoe to use also in places controlled by metal detectors.

AIR MESH

Don't sweat it.

Special double-layer fabric lining: the inner part attracts and absorbs perspiration, and the outer, more compact, gives durability. A combination developed to create a durable, soft and breathable fabric just perfect to keep sweat and unpleasant odours well at bay.

HCT

High Cushioning Technology: Effective technology.

The perfect balance between polymeric components creates an innovative outsole that gives maximum cushioning and a lovely springy energy-return. For great everyday performance.

HRO

Championship resistance

A rubber outsole that provides high resistance against contact heat and abrasion, supporting temperatures of up to 300°C for 60 seconds.

HSA

Heel shock absorber: Heels for connoisseurs.

A special reinforcement with composite compound to absorb shocks and vibrations when the heel strikes the ground gives great rear-foot and overall foot protection even for long periods. The heel is no longer a weak spot.

Double Laces

For quick replacements. Extra laces.

A double lace for a quick change at all times. Different colours to customize the shoe, and not forego a touch of style.

ELS

Extended Lacing System: Extra laces.

With 20% more passing laces than standard, your feet are held snug and firm without being forced, eliminating the risk of pain or movement difficulty.
